

SOMTech PMO

Intro to Estimating Workshop

Wednesday, March 24, 2021

1:00pm – 2:00pm

Agenda

1. Objectives
2. Overview of the Estimating Process
 - Factors Impacting Estimating
 - Benefits
 - Effort
 - Process
 - Estimating Techniques
 - Example Exercise
 - Challenges & Solutions
3. Conclusion/Wrap Up

Objectives

Objectives

By the conclusion of this workshop, participants will:

- Understand the importance of producing reliable estimates of effort
- Understand basic concepts of the estimating process

Overview of the Estimating Process

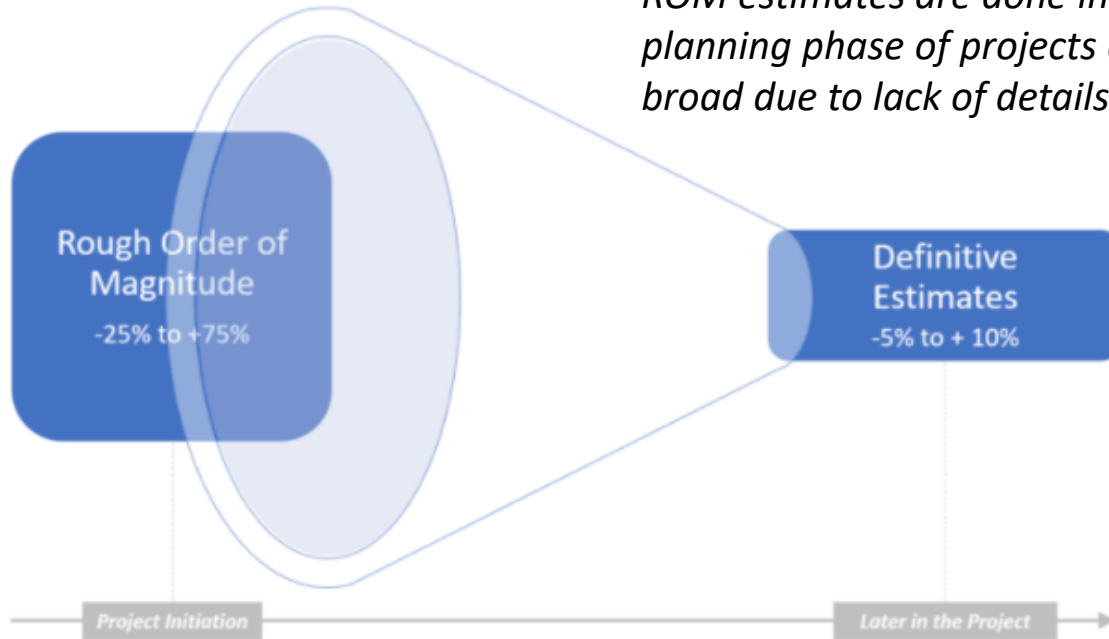

Current State

Rough Order of Magnitude (ROM)

ROM estimates are done in pre-planning or planning phase of projects and variance is very broad due to lack of details

Project-Management.info

Factors Impacting Estimating

- Historical information/data
- Experience Level
- Learning Curve
- Requirements/Specifications

Benefits

Adopting a consistent approach to estimating has several key benefits:

- Provides broader team understanding of how a solution will be delivered
- Increase predictability
- Better determine resource needs
- Gain customer's confidence
- Avoid cost/budget shortfalls

3 Major Parts to Project Estimation

- **Effort** 
- Cost 
- Resource 

In this workshop, we will focus on estimating Effort!

Iterative Process

Traditional Estimating Techniques

| Technique | Description |
|---------------------------------|---|
| Analogous (Top-Down) | Using historical data from a similar activity or project to estimate duration or cost (i.e. ball park estimate) |
| Three-Point (Triangular) | 3 estimates based on Most Likely, Optimistic, and Pessimistic using formula $tE=(tO+tM+tP)/3$ |
| Bottom-Up | Aggregate of lower level component estimates (of WBS) to estimate duration or cost |

Agile Estimating Techniques

| Technique | Description |
|--------------------------------|---|
| Relative/T-shirt Sizing | Sizing a story or feature i.e. XS, S, M, L |
| Affinity | Grouping items that are like sized (can be done using T-shirt sizing) |
| Story Points | Units of measure for expressing an estimate of the overall effort required to fully implement a product backlog item or any other piece of work (points assigned based on complexity, amount of work, risk/uncertainty) |
| Planning Poker | Assign point value to a feature or item (i.e. Fibonacci sequence); Can be used with story points |

Everyday Example of Estimating

Let's estimate something we can all relate to,
commuting to work at SOM...

AS Example of Estimating

FARES 3.0 (“Portfolio) Project is currently primarily date driven; future goal to be more effort driven to improve accuracy

- **Faculty Profile Management feature (#244)**
 - Feature allows user to create main profile & generate outputs such as CV, activity form, etc.
 - 36 hrs of effort to date
 - How many hrs to complete?

Solutions to Current Challenges

- **Lack of historical data as inputs to estimating**
 - **Solution(s):** Create repository of estimates (e.g. features) and historical info
- **Learning curve with new development platform (i.e. .Net Framework to .Net Core, Azure DevOps, Razor Pages)**
 - **Solution(s):** Utilize more experienced team members, understand each others strengths

Conclusion/Wrap Up

Conclusion/Wrap Up

- Any further questions?
- This presentation will be available on the AS Teams site

Thank you for participating!
