

VCUSOM Custom Meta Tag

Nathan Hellenbrand - 2026-01-19 - [Web & Communications](#)

VCUSOM Custom Meta Tag is used to add a custom meta tag to a section.

Meta tags are typically added to a section in the metadata page but sometimes there is necessary meta information that is not listed in the options provided.

The screenshot shows a user interface for managing section metadata. At the top, there are tabs: General, Content, Content types, Page Layouts, and More. The More tab is currently active, showing a dropdown menu with the following options: Metadata (which is highlighted with a blue background), Child sections, Edit rights, and Access. Below the menu, there is a section titled 'Metadata values' with a description: 'Displays the available meta tags that can be set for this section. Use this to only set the metadata value for the current language.'

Fields include:

Name - The Name Element

Content - The content attribute - 160 limit

Example: <meta name='author' content='VCU SOM' >
